

RECOMBINANT SUPER-COMPOUND INTERFERON

ABSTRACT OF THE INVENTION

5 This invention provides a recombinant super-compound
interferon or an equivalent thereof with changed spatial
configuration. The super-compound interferon possesses
anti-viral or anti-tumor activity and therefore is useful
to prevent and treat viral diseases and cancers. This
invention also provides an artificial gene which codes for
10 the super-compound interferon or its equivalent. Finally,
this invention provides methods to produce recombinant
super-compound interferon or its equivalent and various
uses of said interferon.
